

What problem are we solving?

If you are looking for a remote employee for the gaming industry, we are able to help you.

We know how difficult it is to find the right employee in the IT industry. That is why we decided to improve our recruitment process and make an offer to other companies facing this challenge.

We love to develop, experiment and share knowledge. Our company is still developing and we are able to hire a Polish employee for another foreign company.

Why and how?

The game development industry in Poland is developing very quickly.

Poland is one of the most significant European gaming hubs. According to PARP (report from 2021), the Polish video game market is worth around 470 million EUR. There are around 600 game development studios that provide jobs for 12.000 people.

Additionally, to be honest, Polish workers are still cheaper than in Scandinavian and Western European countries.

According to Glassdoor, the median total pay is PLN 18,854 (€4.003 | \$4.256) per month, with PLN 9,427 (€2.001 | \$2.128) on average.

Game testers can expect to earn from PLN 3,500 (€743 | \$790) gross per month at the outset. It turns out that it is a dream market for an employer looking for an experienced employee.

However, many employees are tied to the place where they live and look for work only in Poland.

We work remotely, thanks to which our employees can work for companies spread around the world, which gives us great recruitment opportunities.

What's more, we already have experience, thanks to that we can take care of administrative matters related to the employment of Polish employees for foreign companies.

Don't waste your time on recruiting. We are practitioners, we know gamedev, so we will send you only candidates who are really suitable for a given position.

Our recruitments are carried out by specialists in a given field (we have a full cross-section of specialists in our company).

We even have our own recruitment process for juniors, which takes a bit longer, but generates interesting employees at a good price (we offer employees only after 3 months of internship in our company).

How much does a Game Developer make in Poland?

Related Job Titles

About Us

Crazy Goat Games is an indie game studio based in Poland, dedicated to creating fun and unique takes on video games. With over 10 years of experience in making products for our clients, we've recently started developing games of our own.

In addition to making successful games for over a year, we have been developing the second branch of the company's activity - hiring employees. We have employed several employees mainly for Scandinavian companies.

Our team is full of ambitious and like-minded individuals with crazy ideas and various skill sets, which results in bringing innovation and freshness to all our games.

Working remotely from the cozy abodes of our homes from all across Poland, we aim to further hone our craft and grow our portfolio, hoping to bring cheer and entertainment to all sorts of players. If you are interested in our productions, more at <http://crazygoat.games>.
